Art Unit: 1772

1. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The meaning and scope of the phrase "during the without" is not clear.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 6 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kelly ('168). See Figure 3 and column 3, lines 6-45.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelly ('168). The reference discloses the invention substantially as claimed; see Figure 3 and column 3, lines 6-45. However it does not disclose the use of nylon as a substrate material. The reference does suggest the use of olefins and polypropylene as a

Art Unit: 1772

substrate material; see column 3, line 29. It would have been obvious to one of ordinary skill in the art to use any well known olefin, such as nylon, as a substrate material in the article of the reference to provide the optimum physical properties for a particular end use. Similarly, it would have been obvious to one of ordinary skill in the art to use a mixture of known materials as the substrate material in the article of the reference to provide optimum properties for a particular end use.
